

THE RESEARCH CONNECTION

Sponsored by the Brooks/UF-PHHP Research Collaboration

“Beyond Gait Speed: Regaining Health in the presence of Post-Stroke Disability”

Gait speed is now promoted as the 6th vital sign and has become integrated into physical therapy evaluations, providing clinicians a simple and objective measure to document our patients’ progress. However, if our patients attain a certain gait speed, are they set for life? Can we assume they will return to community participation? They may have re-gained ambulatory status, but have we returned them to health?

This webinar will explore these questions and suggest solutions to prepare our patients for an engaged return to their community.

About the Speaker

Dorian K. Rose, PT, PhD

Dr. Rose serves as a Research Scientist within the Brooks/UF-PHHP Research Collaboration; a Research Associate Professor in the Department of Physical Therapy at the University of Florida; and a Research Health Scientist at the Malcom Randall VA Medical Center. She has had a long-standing relationship with Brooks Rehabilitation dating back to 2005 and has conducted several research studies at the Brooks Clinical Research Center. Her interests as a researcher, clinician, and educator are in adult neurorehabilitation. Specifically, she studies intervention strategies based on principles of neuroplasticity and motor learning, for the rehabilitation of motor control deficits of both the upper extremity and gait as well as respiratory health.
